2

#### **Overall Test Object Results (including Coverage)**

#### **Selected Project Items**

Test Collection "CBD\_UnitTest"

#### **Used Test Environments**

TI TMS 570 PLS UDE (Default)

#### **Batch Operation Settings**

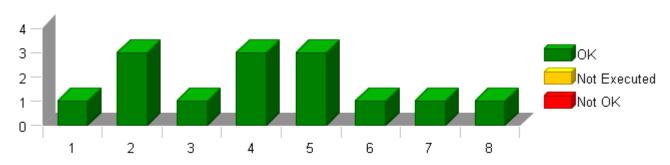

Check Interface: No
Generate Driver: Yes
Execute Test: Yes
Create New Test Run: No

**Instrumentation:** Test Object Only

Coverage: Statement Coverage, Branch Coverage, Modified Condition / Decision Coverage,

Multiple Condition Coverage

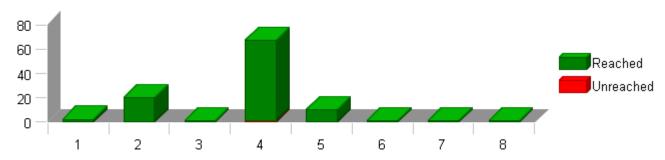

#### **Test Case Results for Each Test Object (without Coverage)**

The table above shows each test object on the x axis and the number of test cases of the respective test object on the y axis. Each bar is divided into passed, not executed and failed test cases. The test case results do not take into account any coverage result (i.e. if all test cases of a test object are passed in this table but the coverage is failed, the overall test object result will be failed).

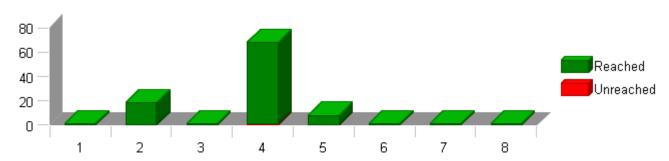

#### Statement (C0) Coverage: Total Statements for Each Test Object

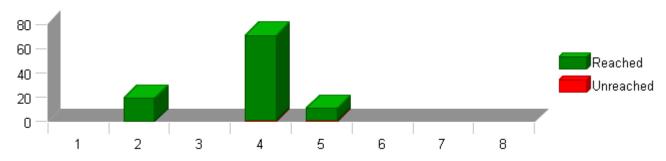

The table above shows each test object on the x axis and the number of statements of the respective test object on the y axis. Each bar is divided into reached statements (i.e. statements that have been executed during the test) and unreached statements.

#### Branch (C1) Coverage: Total Branches for Each Test Object

The table above shows each test object on the x axis and the number of branches of the respective test object on the y axis. Each bar is divided into reached branches (i.e. branches that have been executed during the test) and unreached branches.

#### MC/DC Coverage: Total Condition Combinations for Each Test Object

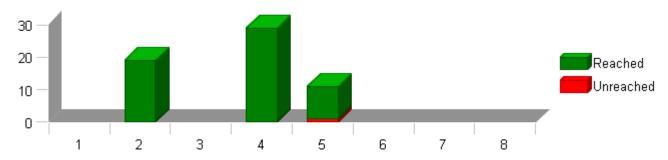

The table above shows test objects on the x axis and the number of condition combinations of all decisions of the respective test object on the y axis. The number of condition combinations is based on the number of boolean conditions within each decision of the test object. To achieve full MC/DC coverage, each decision requires all contained atomic conditions to evaluate to both true and false independently of all other conditions. The cumulated number of rows within such tables of condition combinations is what is displayed in this table.

Each bar is divided into reached condition combinations (i.e. combinations of boolean condition values that have been executed during the test) and unreached condition combinations.

#### MCC Coverage: Total Condition Combinations for Each Test Object

The table above shows test objects on the x axis and the number of condition combinations of all decisions of the respective test object on the y axis. The number of condition combinations is based on the number of boolean conditions within each decision of the test object. To achieve full MCC coverage, each decision requires all contained atomic conditions to evaluate to all possible combinations of true and false values. The cumulated number of rows within such tables of condition combinations is what is displayed in this table.

Each bar is divided into reached condition combinations (i.e. combinations of boolean condition values that have been executed during the test) and unreached condition combinations.

#### **TEST OVERVIEW REPORT**

2014-10-14, 23:47:43+0530

# **Test Object List**

Project DigColPsInt

The following table lists all test objects with their test case and coverage results. The cumulated results for modules, folders and test collections are also displayed, the indentation within the name column indicates the parent relationship of the elements.

Please note that only test objects are numbered within the first column. This number is referenced on the x axis within the overview charts for test case and coverage results available on previous pages (if included into the report).

No.	Name	C0	C1	MC/DC	MCC	Test Cases Result

Model Version:Nexteer EPS Unit Test Tool 2.7d/EPS Library 1.30
Total FLASH Used (Bytes):N/A
Total RAM Used (Bytes):N/A

Total CALS Used (Bytes):N/A Special Test Requirements: Test Date:10/13/2014 Comments:

NOTE 1: In """"DigColPsInt\_StartRequest"""" function, path """"(Type\_Cnt\_T\_u08 > D\_NONE\_CNT\_U08) = TRUE && (Type\_Cnt\_T\_u08 <= D\_STATUSREG\_CNT\_U08) = FALSE""" cannot be covered because range of """"Type\_Cnt\_T\_u08"""" is '0-5' and value of """D\_STATUSREG\_CNT\_U08""" is '34'.

NOTE2: In function ""DigColPsInt\_GetData"",""DigColPsInt\_StartRequest"" and ""DigColPsInt\_InterruptNotification"" values for """12c\_Send(Length\_Cnt\_T\_u32)"""", """12c\_SetRecv(Length\_Cnt\_T\_u16)"""", """12c\_SetStatus(Status\_Cnt\_T\_u16)""", """12c\_SetUpMasterReceive(DataLength\_Cnt\_T\_u16)""" and 12c\_SetUpMasterTransmit(DataLength\_Cnt\_T\_u16) are ignored in few vectors as they

are taking garbage value when they are not updated with expected value in particular vector.

NOTE3: The return value of """"DigColPsInt\_GetData""" function is going out of range, anomaly """6156""" is raised for the same.

NOTE4:Range of DigColPsInt\_CurrentStepNo\_Cnt\_M\_enum is considered as 0 to 36, as enum DigColPsInt\_CurrentStepNo\_Cnt\_M\_enum is of type CommStepType which is of 37 elements.

NOTE5:In function ""DigColPsInt\_InterruptNotification"", path ""Case I2C\_RECV\_OVERRUN: True"" cannot be covered because range of ""Flags\_Cnt\_T\_b16"" is 0 to 64 given in MDD.

NOTE6:In function ""DigColPsInt\_InterruptNotification"", output variable ""DigColPsInt\_AttempOccurForCustDatRead\_Cnt\_M\_u08"" is going out

of range.'

Model Type:Excel Macro
Model Version:Nexteer EPS Unit Test Tool 2.7d/EPS Library 1.30
Total FLASH Used (Bytes):N/A
Total RAM Used (Bytes):N/A Total CALS Used (Bytes):N/A Special Test Requirements: Test Date:10/13/2014 Comments:

NOTE 1: In """"DigColPsInt\_StartRequest"""" function, path """"(Type\_Cnt\_T\_u08 > D\_NONE\_CNT\_U08) = TRUE && (Type\_Cnt\_T\_u08 <= D\_STATUSREG\_CNT\_U08) = FALSE""" cannot be covered because range of """"Type\_Cnt\_T\_u08"""" is '0-5' and value of """"D\_STATUSREG\_CNT\_U08""" is '34'.

NOTE2: In function ""DigColPsInt\_GetData"",""DigColPsInt\_StartRequest"" and ""DigColPsInt\_InterruptNotification"" values for """12c\_Send(Length\_Cnt\_T\_u32)"""", """12c\_SetRecv(Length\_Cnt\_T\_u16)"""", """12c\_SetStatus(Status\_Cnt\_T\_u16)""", """12c\_SetUpMasterReceive(DataLength\_Cnt\_T\_u16)""" and 12c\_SetUpMasterTransmit(DataLength\_Cnt\_T\_u16) are ignored in few vectors as they

are taking garbage value when they are not updated with expected value in particular vector.

NOTE3: The return value of """"DigColPsInt\_GetData""" function is going out of range, anomaly """6156""" is raised for the same.

NOTE4:Range of DigColPsInt\_CurrentStepNo\_Cnt\_M\_enum is considered as 0 to 36, as enum DigColPsInt\_CurrentStepNo\_Cnt\_M\_enum is of type CommStepType which is of 37 elements.

NOTE5:In function ""DigColPsInt\_InterruptNotification"", path ""Case I2C\_RECV\_OVERRUN: True"" cannot be covered because range of ""Flags\_Cnt\_T\_b16"" is 0 to 64 given in MDD.

NOTE6:In function ""DigColPsInt\_InterruptNotification"", output variable ""DigColPsInt\_AttempOccurForCustDatRead\_Cnt\_M\_u08"" is going out

of range.'

Module 'DigColPsInt' 

Name of Tester:Priti Mangalekar Code File(s) Under Test:Sa\_DigColPsInt.c Code File(s) Version:7

Module Design Document:DigColPsInt\_MDD.docx Module Design Document Version:8

Data Dictionary Version:9 Unit Test Plan Version:2

Unit Lest Plan Version:2
Optimization Level:Level 2
Compiler (CodeGen) Version:TMS470\_4.9.5
Model Type:Excel Macro
Model Version:Nexteer EPS Unit Test Tool 2.7d/EPS Library 1.30
Total FLASH Used (Bytes):N/A
Total RAM Used (Bytes):N/A Total CALS Used (Bytes):N/A Special Test Requirements: Test Date:10/13/2014 Comments:

NOTE 1: In """"DigColPsInt\_StartRequest"""" function, path """"(Type\_Cnt\_T\_u08 > D\_NONE\_CNT\_U08) = TRUE && (Type\_Cnt\_T\_u08 <= D\_STATUSREG\_CNT\_U08) = FALSE""" cannot be covered because range of """"Type\_Cnt\_T\_u08"""" is '0-5' and value of """D\_STATUSREG\_CNT\_U08""" is '34'.

NOTE2: In function ""DigColPsInt\_GetData"",""DigColPsInt\_StartRequest"" and ""DigColPsInt\_InterruptNotification"" values for """12c\_Send(Length\_Cnt\_T\_u32)"""", """12c\_SetRecv(Length\_Cnt\_T\_u16)"""", """12c\_SetStatus(Status\_Cnt\_T\_u16)""", """12c\_SetUpMasterReceive(DataLength\_Cnt\_T\_u16)""" and 12c\_SetUpMasterTransmit(DataLength\_Cnt\_T\_u16) are ignored in few vectors as they

are taking garbage value when they are not updated with expected value in particular vector.

NOTE3: The return value of """"DigColPsInt\_GetData""" function is going out of range, anomaly """6156""" is raised for the same.

NOTE4:Range of DigColPsInt\_CurrentStepNo\_Cnt\_M\_enum is considered as 0 to 36, as enum DigColPsInt\_CurrentStepNo\_Cnt\_M\_enum is of type CommStepType which is of 37 elements.

NOTE5:In function ""DigColPsInt\_InterruptNotification"", path ""Case I2C\_RECV\_OVERRUN: True"" cannot be covered because range of ""Flags\_Cnt\_T\_b16"" is 0 to 64 given in MDD.

NOTE6:In function ""DigColPsInt\_InterruptNotification"", output variable ""DigColPsInt\_AttempOccurForCustDatRead\_Cnt\_M\_u08"" is going out

of range.'

Module 'DigColPsInt' 

Name of Tester:Priti Mangalekar Code File(s) Under Test:Sa\_DigColPsInt.c Code File(s) Version:7

Module Design Document:DigColPsInt\_MDD.docx Module Design Document Version:8

Data Dictionary Version:9 Unit Test Plan Version:2

Unit Lest Plan Version:2
Optimization Level:Level 2
Compiler (CodeGen) Version:TMS470\_4.9.5
Model Type:Excel Macro
Model Version:Nexteer EPS Unit Test Tool 2.7d/EPS Library 1.30
Total FLASH Used (Bytes):N/A
Total RAM Used (Bytes):N/A

Total CALS Used (Bytes):N/A Special Test Requirements: Test Date:10/13/2014 Comments:

NOTE 1: In """"DigColPsInt\_StartRequest"""" function, path """"(Type\_Cnt\_T\_u08 > D\_NONE\_CNT\_U08) = TRUE && (Type\_Cnt\_T\_u08 <= D\_STATUSREG\_CNT\_U08) = FALSE""" cannot be covered because range of """"Type\_Cnt\_T\_u08"""" is '0-5' and value of """"D\_STATUSREG\_CNT\_U08""" is '34'.

NOTE2: In function ""DigColPsInt\_GetData"",""DigColPsInt\_StartRequest"" and ""DigColPsInt\_InterruptNotification"" values for """12c\_Send(Length\_Cnt\_T\_u32)"""", """12c\_SetRecv(Length\_Cnt\_T\_u16)"""", """12c\_SetStatus(Status\_Cnt\_T\_u16)""", """12c\_SetUpMasterReceive(DataLength\_Cnt\_T\_u16)""" and 12c\_SetUpMasterTransmit(DataLength\_Cnt\_T\_u16) are ignored in few vectors as they

are taking garbage value when they are not updated with expected value in particular vector.

NOTE3: The return value of """"DigColPsInt\_GetData""" function is going out of range, anomaly """"6156""" is raised for the same.

NOTE4:Range of DigColPsInt\_CurrentStepNo\_Cnt\_M\_enum is considered as 0 to 36, as enum DigColPsInt\_CurrentStepNo\_Cnt\_M\_enum is of type CommStepType which is of 37 elements.

NOTE5:In function ""DigColPsInt\_InterruptNotification"", path ""Case I2C\_RECV\_OVERRUN: True"" cannot be covered because range of ""Flags\_Cnt\_T\_b16"" is 0 to 64 given in MDD.

NOTE6:In function ""DigColPsInt\_InterruptNotification"", output variable ""DigColPsInt\_AttempOccurForCustDatRead\_Cnt\_M\_u08"" is going out

of range.'
